Avg Resolution Time

59.55

Unresolved Tickets

58

% Negative Sentiment

22.56%

Finding: "High" priority tickets resolve in roughly the same time as "Critical" priority tickets (~60 vs. ~55 hours) critical tickets are barely faster despite the urgency label.

Why it matters: If critical issues aren't meaningfully prioritized over high-priority ones in practice, customers with the most severe problems may be experiencing longer-than-expected wait times, directly affecting sentiment and retention.

Recommendation: Review the support team's triage/SLA process to confirm critical tickets are being properly escalated and fast-tracked ahead of high-priority tickets.

Finding: Account ACCT-045 has the highest average deal value (~\$9,500) among all negative-sentiment accounts in the top-20 by ticket volume, while ACCT-041 has the highest ticket volume (~68 tickets) among negative-sentiment accounts.

Why it matters: These are exactly the accounts Sarah flagged as highest-risk high-value customers with elevated support friction and negative sentiment are the most likely to churn.

Recommendation: Assign a dedicated customer success manager to proactively reach out to ACCT-045 and ACCT-041 within the next two weeks to address outstanding issues before renewal risk increases.

Deal Outcomes by Stage and Loss Reason

deal_stage	opportunity_id (Count distinct)	Loss Reason
Won	315	
Lost	184	empty (43), Budget Constraints (43), Competitor Won (43), No Decision Made (43), Poor Product Fit (43), Timing Not Right (43)

Finding: "Poor Product Fit" and "No Decision Made" are tied as the top loss reasons (43 deals each), together accounting for nearly half of all 184 lost deals.

Why it matters:

These two reasons point to different root causes: product-market mismatch vs. sales-process/urgency gaps, and each needs a distinct fix.

Recommendation:

Sales enablement should audit lost-deal notes for "No Decision Made" opportunities to test urgency-building tactics, while product marketing should investigate "Poor Product Fit" losses for positioning or segment-targeting issues.

Funnel Stage

Funnel Stage	Count
Prospect	384
Lead	434
Qualified Lead	788
Opportunity	102
Closed Won	382

Group By: funnel_stage
Value: lead_id (Count distinct)

Finding: Lead-to-Qualified-Lead conversion drops 82% (434 → 78), the steepest drop of any funnel stage far larger than the decline at any other transition.

Why it matters: This is where the vast majority of marketing-generated leads are being lost before they ever reach a sales rep, directly limiting how much of the \$27K+ in campaign spend converts into pipeline.

Recommendation: Review lead qualification criteria and the MQL → SQL handoff process between marketing and sales to identify where and why leads are being disqualified at this stage.

Campaign Performance table

campaign_name	campaign_spend	revenue_attributed	campaign_roi
Digital Retarget	14,914.28	4,917.82	-0.9
Enterprise Expansion	14,927.49	4,774.42	-0.91
NovaEdge Awareness	14,995.14	4,284.32	-1
NovaPulse Launch	14,969.63	5,575.51	-0.9
Q3 Growth Sprint	14,909.83	4,221.51	-0.96
Year-End Accelerator	14,967.23	5,074.09	-0.94

Finding: All 6 active campaigns currently show negative ROI, ranging from -0.90 to -1.00 (i.e., losing close to the full amount spent).

Why it matters: NovaTech is not currently recovering its ~\$90K in total campaign spend through attributed revenue on any channel, which directly affects marketing budget justification.

Recommendation: Pause or reallocate budget from the lowest-ROI campaign (NovaEdge Awareness, at -1.00) toward the relatively stronger performers (Digital Retarget, Enterprise Expansion) pending a full attribution review.
